2022

UCD VALIANT BENEFITS

-  **An outstanding day-neutral cultivar for organic and conventional production systems**
-  **Consistently produces high yields early in the growing season**
-  **Highly productive in warmer environments where day-neutral cultivars thrive**
-  **Very large, flavourful, visually appealing fruit**

Developed at the University of California, Davis for long season production in typical day-neutral growing regions. UCD Valiant has been a standout in both organic and conventional production systems, typically delivers high early yields of marketable fruit, and has excelled in warmer dayneutral environments. This cultivar produces very large, firm, visually appealing fruit with a long shelf life.

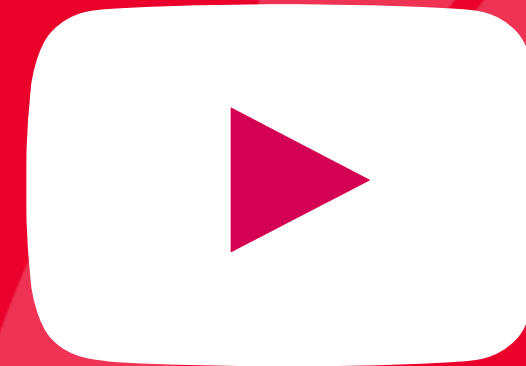

High Yields of Marketable Fruit in Organic and Conventional Production Systems

UCD Valiant is an asexually propagated hybrid suitable for a wide range of dayneutral environments and production systems. UCD Valiant has been one of the most reliable and productive cultivars in organic and low-input production systems and commonly produces high yields of marketable fruit early in the growing season.

GPG

UCD VALIANT OVERVIEW

Plant Habit

Large crowns and
vigorous plant

Seasonality

Early

Quality

Very large, firm, visually
appealing fruit with a
long shelf life

Climate

Typical European day-
neutral and everbearing
production environments

Cultivar

Asexually
propagated
hybrid

Planting Density

45,000 to 50,000
plants/hectare

Chilling Requirements

200 to 400 chilling hours
recommended for
maximum yield

Yield

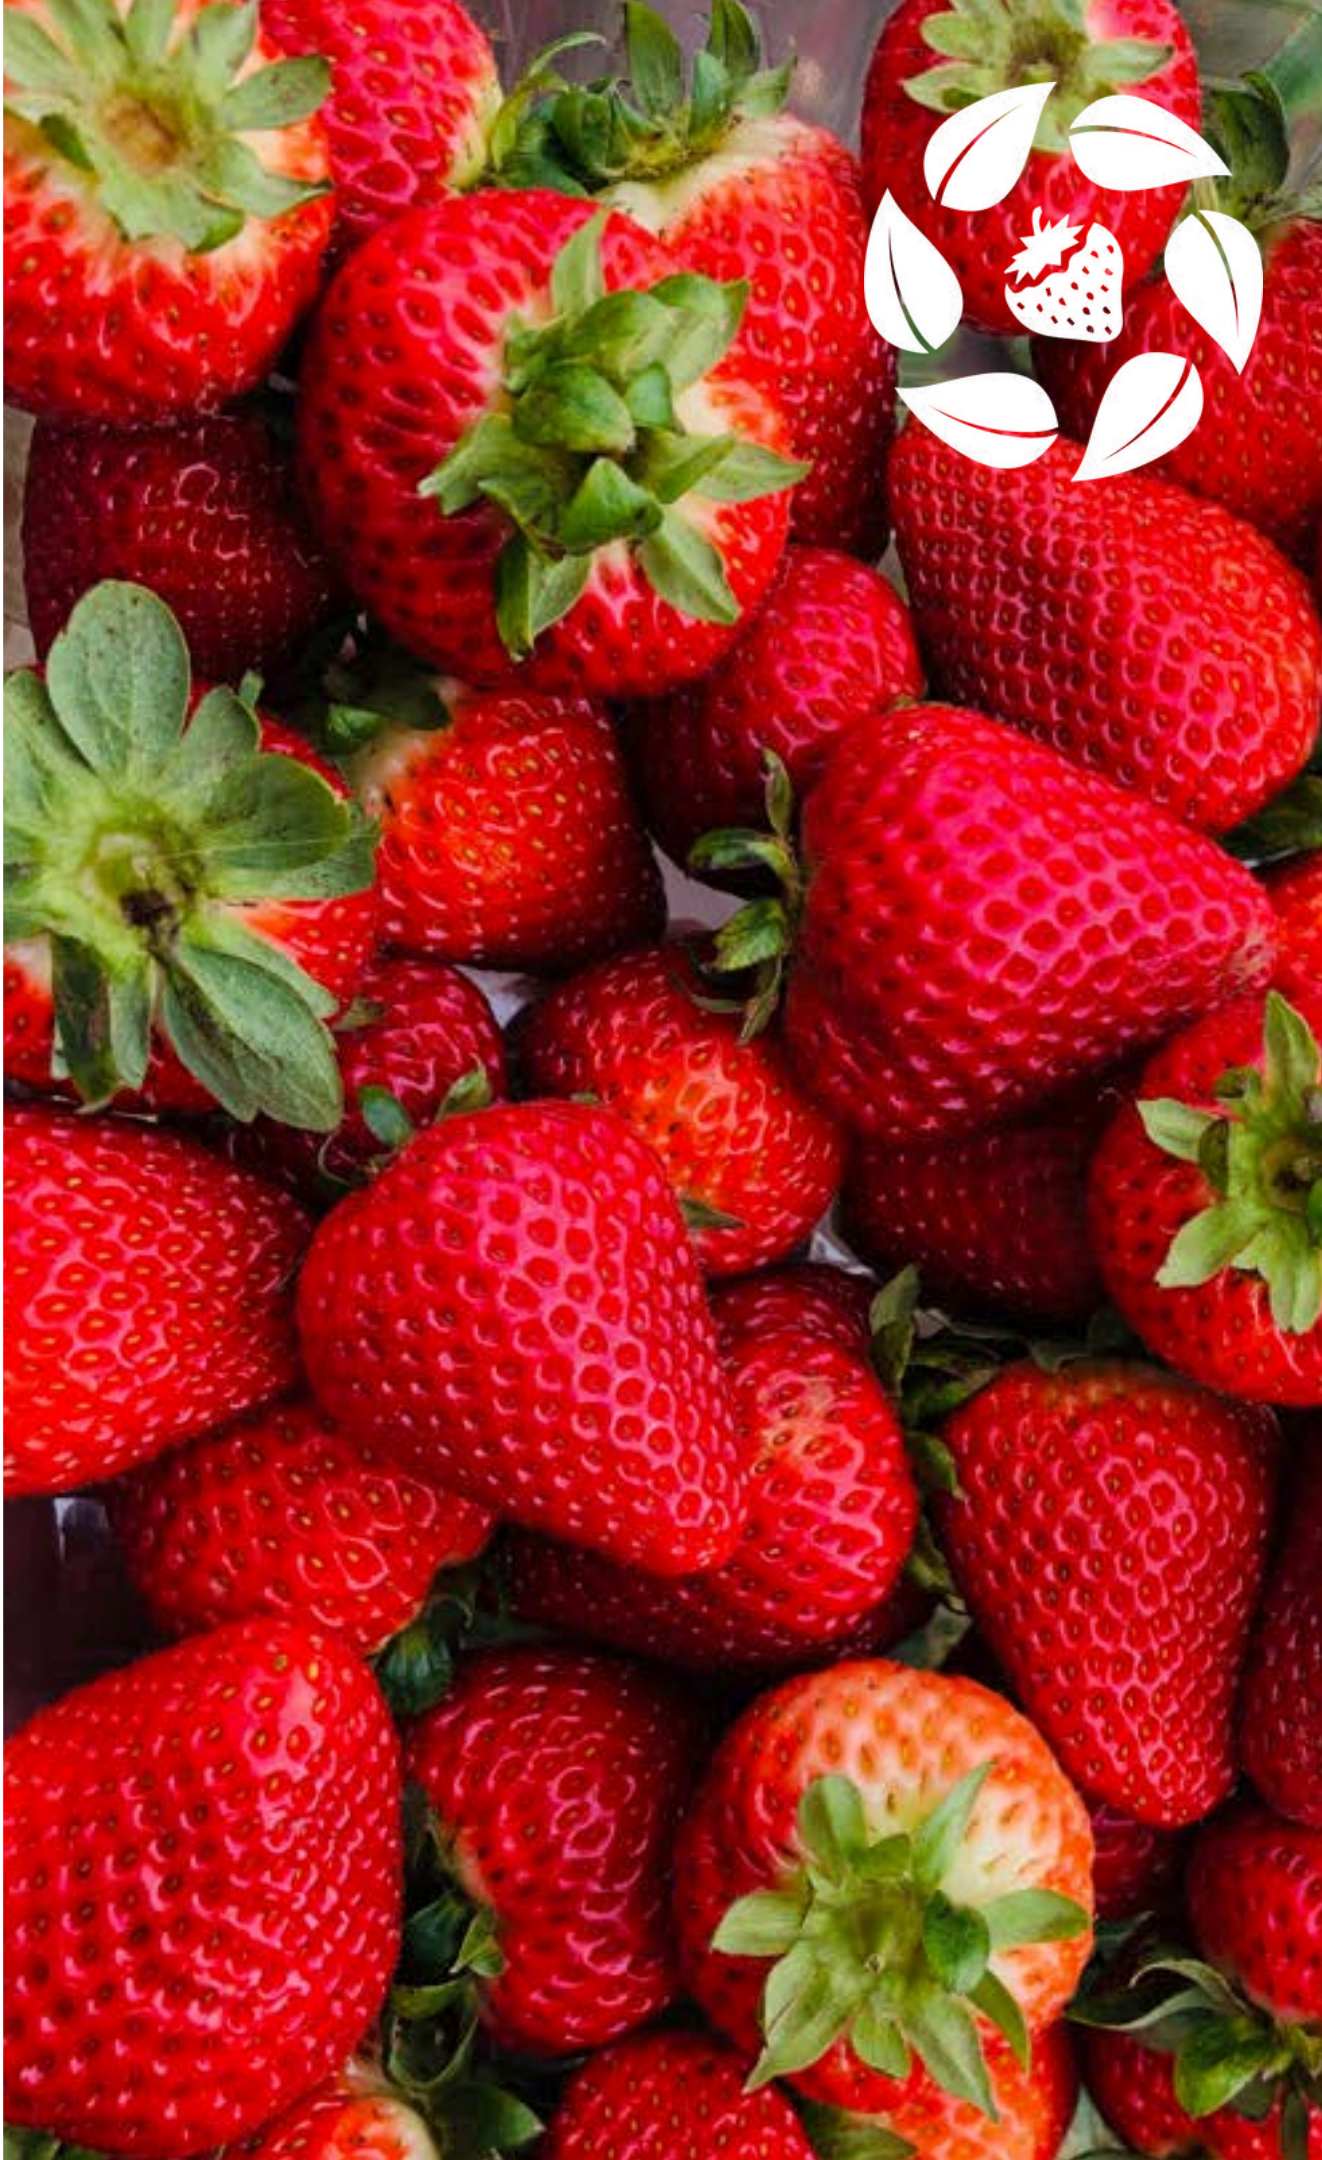

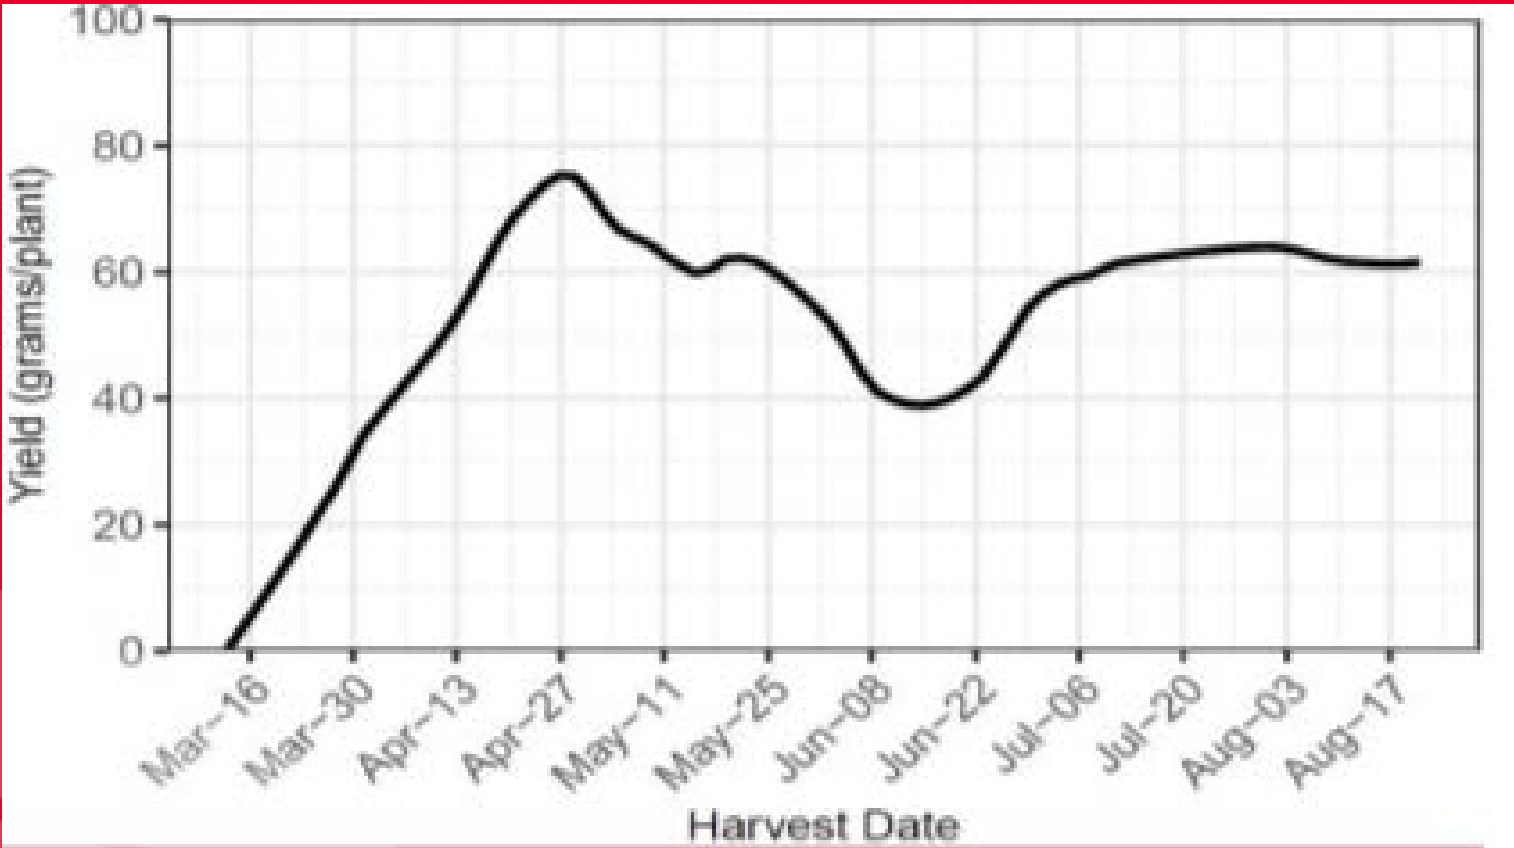

Consistently high yields
of marketable fruit

UCD VALIANT OVERVIEW

🍓 Ideal for consistent year round fresh market production

🍓 High yielding and disease resistant

UCD VALIANT REVIEW

“We visited California with Global Plant Genetics and were excited to see UCD Valiant there in grower trials. The fruit looked great and the plants very healthy. We are trialing now in Northern Europe and early indications are very positive”

Werner Hack, Rapo. Netherlands
